# Networking requirements for the Connector

Cloud Manager

Ben Cammett September 23, 2020

This PDF was generated from https://docs.netapp.com/us-en/occm/reference\_networking\_cloud\_manager.html on November 10, 2020. Always check docs.netapp.com for the latest.

# **Table of Contents**

| Networking requirements  | for the Connecto | r | <br> | . ] |
|--------------------------|------------------|---|------|------|------|------|------|------|------|------|-----|
| Connection to target net | works            |   | <br> | . 1 |

# **Networking requirements for the Connector**

Set up your networking so the Connector can manage resources and processes within your public cloud environment. The most important step is ensuring outbound internet access to various endpoints.

If your network uses a proxy server for all communication to the internet, you can specify the proxy server from the Settings page. Refer to Configuring the Connector to use a proxy server.

# Connection to target networks

A Connector requires a network connection to the type of working environment that you're creating and the services that you're planning to enable.

For example, if you install a Connector in your corporate network, then you must set up a VPN connection to the VPC or VNet in which you launch Cloud Volumes ONTAP.

### **Outbound internet access**

The Connector requires outbound internet access to manage resources and processes within your public cloud environment. Outbound internet access is also required if you want to manually install the Connector on a Linux host or access the local UI running on the Connector.

The following sections identify the specific endpoints.

## **Endpoints to manage resources in AWS**

A Connector contacts the following endpoints when managing resources in AWS:

Endpoints	Purpose
<ul> <li>AWS services (amazonaws.com):</li> <li>CloudFormation</li> <li>Elastic Compute Cloud (EC2)</li> <li>Key Management Service (KMS)</li> <li>Security Token Service (STS)</li> <li>Simple Storage Service (S3)</li> <li>The exact endpoint depends on the region in which you deploy Cloud Volumes ONTAP. Refer to AWS documentation for details.</li> </ul>	Enables the Connector to deploy and manage Cloud Volumes ONTAP in AWS.
https://api.services.cloud.netapp.com:443	API requests to NetApp Cloud Central.
https://cloud.support.netapp.com.s3.us- west-1.amazonaws.com	Provides access to software images, manifests, and templates.
https://repo.cloud.support.netapp.com	Used to download Cloud Manager dependencies.
http://repo.mysql.com/	Used to download MySQL.
https://cognito-idp.us-east- 1.amazonaws.com https://cognito-identity.us-east- 1.amazonaws.com https://sts.amazonaws.com https://cloud-support-netapp-com- accelerated.s3.amazonaws.com	Enables the Connector to access and download manifests, templates, and Cloud Volumes ONTAP upgrade images.
https://cloudmanagerinfraprod.azurecr.io	Access to software images of container components for an infrastructure that's running Docker and provides a solution for service integrations with Cloud Manager.
https://kinesis.us-east-1.amazonaws.com	Enables NetApp to stream data from audit records.
https://cloudmanager.cloud.netapp.com	Communication with the Cloud Manager service, which includes Cloud Central accounts.
https://netapp-cloud-account.auth0.com	Communication with NetApp Cloud Central for centralized user authentication.
https://w86yt021u5.execute-api.us-east- 1.amazonaws.com/production/whitelist	Used to add your AWS account ID to the list of allowed users for Backup to S3.

Endpoints	Purpose
https://support.netapp.com/aods/asupmess age https://support.netapp.com/asupprod/post/ 1.0/postAsup	Communication with NetApp AutoSupport.
https://support.netapp.com/svcgw https://support.netapp.com/ServiceGW/enti tlement https://eval.lic.netapp.com.s3.us-west- 1.amazonaws.com https://cloud-support-netapp-com.s3.us- west-1.amazonaws.com	Communication with NetApp for system licensing and support registration.
https://client.infra.support.netapp.com.s3.u s-west-1.amazonaws.com https://cloud-support-netapp-com- accelerated.s3.us-west-1.amazonaws.com https://trigger.asup.netapp.com.s3.us-west- 1.amazonaws.com	Enables NetApp to collect information needed to troubleshoot support issues.
https://ipa- signer.cloudmanager.netapp.com	Enables Cloud Manager to generate licenses (for example, a FlexCache license for Cloud Volumes ONTAP)
https://packages.cloud.google.com/yum https://github.com/NetApp/trident/releases/ download/	Required to connect Cloud Volumes ONTAP systems with a Kubernetes cluster. The endpoints enable installation of NetApp Trident.
Various third-party locations, for example:  • https://repo1.maven.org/maven2  • https://oss.sonatype.org/content/reposit ories  • https://repo.typesafe.com  Third-party locations are subject to change.	During upgrades, Cloud Manager downloads the latest packages for third-party dependencies.

# Endpoints to manage resources in Azure

A Connector contacts the following endpoints when managing resources in Azure:

Endpoints	Purpose
https://management.azure.com https://login.microsoftonline.com	Enables Cloud Manager to deploy and manage Cloud Volumes ONTAP in most Azure regions.
https://management.microsoftazure.de https://login.microsoftonline.de	Enables Cloud Manager to deploy and manage Cloud Volumes ONTAP in the Azure Germany regions.
https://management.usgovcloudapi.net https://login.microsoftonline.com	Enables Cloud Manager to deploy and manage Cloud Volumes ONTAP in the Azure US Gov regions.
https://api.services.cloud.netapp.com:443	API requests to NetApp Cloud Central.
https://cloud.support.netapp.com.s3.us- west-1.amazonaws.com	Provides access to software images, manifests, and templates.
https://repo.cloud.support.netapp.com	Used to download Cloud Manager dependencies.
http://repo.mysql.com/	Used to download MySQL.
https://cognito-idp.us-east- 1.amazonaws.com https://cognito-identity.us-east- 1.amazonaws.com https://sts.amazonaws.com https://cloud-support-netapp-com- accelerated.s3.amazonaws.com	Enables the Connector to access and download manifests, templates, and Cloud Volumes ONTAP upgrade images.
https://cloudmanagerinfraprod.azurecr.io	Access to software images of container components for an infrastructure that's running Docker and provides a solution for service integrations with Cloud Manager.
https://kinesis.us-east-1.amazonaws.com	Enables NetApp to stream data from audit records.
https://cloudmanager.cloud.netapp.com	Communication with the Cloud Manager service, which includes Cloud Central accounts.
https://netapp-cloud-account.auth0.com	Communication with NetApp Cloud Central for centralized user authentication.
https://mysupport.netapp.com	Communication with NetApp AutoSupport.
https://support.netapp.com/svcgw https://support.netapp.com/ServiceGW/enti tlement https://eval.lic.netapp.com.s3.us-west- 1.amazonaws.com https://cloud-support-netapp-com.s3.us- west-1.amazonaws.com	Communication with NetApp for system licensing and support registration.

Endpoints	Purpose
https://client.infra.support.netapp.com.s3.u s-west-1.amazonaws.com https://cloud-support-netapp-com- accelerated.s3.us-west-1.amazonaws.com https://trigger.asup.netapp.com.s3.us-west- 1.amazonaws.com	Enables NetApp to collect information needed to troubleshoot support issues.
https://ipa- signer.cloudmanager.netapp.com	Enables Cloud Manager to generate licenses (for example, a FlexCache license for Cloud Volumes ONTAP)
https://packages.cloud.google.com/yum https://github.com/NetApp/trident/releases/ download/	Required to connect Cloud Volumes ONTAP systems with a Kubernetes cluster. The endpoints enable installation of NetApp Trident.
*.blob.core.windows.net	Required for HA pairs when using a proxy.
Various third-party locations, for example:  • https://repo1.maven.org/maven2  •	During upgrades, Cloud Manager downloads the latest packages for third-party dependencies.
https://oss.sonatype.org/content/reposit ories	
• https://repo.typesafe.com	
Third-party locations are subject to change.	

# **Endpoints to manage resources in GCP**

A Connector contacts the following endpoints when managing resources in GCP:

Endpoints	Purpose
https://www.googleapis.com	Enables the Connector to contact Google APIs for deploying and managing Cloud Volumes ONTAP in GCP.
https://api.services.cloud.netapp.com:443	API requests to NetApp Cloud Central.
https://cloud.support.netapp.com.s3.us- west-1.amazonaws.com	Provides access to software images, manifests, and templates.
https://repo.cloud.support.netapp.com	Used to download Cloud Manager dependencies.
http://repo.mysql.com/	Used to download MySQL.

Endpoints	Purpose
https://cognito-idp.us-east- 1.amazonaws.com https://cognito-identity.us-east- 1.amazonaws.com https://sts.amazonaws.com https://cloud-support-netapp-com- accelerated.s3.amazonaws.com	Enables the Connector to access and download manifests, templates, and Cloud Volumes ONTAP upgrade images.
https://cloudmanagerinfraprod.azurecr.io	Access to software images of container components for an infrastructure that's running Docker and provides a solution for service integrations with Cloud Manager.
https://kinesis.us-east-1.amazonaws.com	Enables NetApp to stream data from audit records.
https://cloudmanager.cloud.netapp.com	Communication with the Cloud Manager service, which includes Cloud Central accounts.
https://netapp-cloud-account.auth0.com	Communication with NetApp Cloud Central for centralized user authentication.
https://mysupport.netapp.com	Communication with NetApp AutoSupport.
https://support.netapp.com/svcgw https://support.netapp.com/ServiceGW/enti tlement https://eval.lic.netapp.com.s3.us-west- 1.amazonaws.com https://cloud-support-netapp-com.s3.us- west-1.amazonaws.com	Communication with NetApp for system licensing and support registration.
https://client.infra.support.netapp.com.s3.u s-west-1.amazonaws.com https://cloud-support-netapp-com- accelerated.s3.us-west-1.amazonaws.com https://trigger.asup.netapp.com.s3.us-west- 1.amazonaws.com	Enables NetApp to collect information needed to troubleshoot support issues.
https://ipa- signer.cloudmanager.netapp.com	Enables Cloud Manager to generate licenses (for example, a FlexCache license for Cloud Volumes ONTAP)
https://packages.cloud.google.com/yum https://github.com/NetApp/trident/releases/ download/	Required to connect Cloud Volumes ONTAP systems with a Kubernetes cluster. The endpoints enable installation of NetApp Trident.

Endpoints	Purpose
Various third-party locations, for example:	During upgrades, Cloud Manager downloads the latest
• https://repo1.maven.org/maven2	packages for third-party dependencies.
•	
https://oss.sonatype.org/content/reposit ories	
• https://repo.typesafe.com	
Third-party locations are subject to change.	

### Endpoints to install the Connector on a Linux host

You have the option to manually install the Connector software on your own Linux host. If you do, the installer for the Connector must access the following URLs during the installation process:

- http://dev.mysql.com/get/mysql-community-release-el7-5.noarch.rpm
- https://dl.fedoraproject.org/pub/epel/epel-release-latest-7.noarch.rpm
- https://s3.amazonaws.com/aws-cli/awscli-bundle.zip

The host might try to update operating system packages during installation. The host can contact different mirroring sites for these OS packages.

# Endpoints accessed from your web browser when using the local UI

While you should perform almost all tasks from the SaaS user interface, a local user interface is still available on the Connector. The machine running the web browser must have connections to the following endpoints:

Endpoints	Purpose
The Connector host	You must enter the host's IP address from a web browser to load the Cloud Manager console.
	Depending on your connectivity to your cloud provider, you can use the private IP or a public IP assigned to the host:
	• A private IP works if you have a VPN and direct connect access to your virtual network
	A public IP works in any networking scenario
	In any case, you should secure network access by ensuring that security group rules allow access from only authorized IPs or subnets.
https://auth0.com https://cdn.auth0.com https://netapp-cloud-account.auth0.com https://services.cloud.netapp.com	Your web browser connects to these endpoints for centralized user authentication through NetApp Cloud Central.
https://widget.intercom.io	For in-product chat that enables you to talk to NetApp cloud experts.

# Ports and security groups

There's no incoming traffic to the Connector, unless you initiate it. HTTP and HTTPS provide access to the local UI, which you'll use in rare circumstances. SSH is only needed if you need to connect to the host for troubleshooting.

#### **Rules for the Connector in AWS**

The security group for the Connector requires both inbound and outbound rules.

#### **Inbound rules**

The source for inbound rules in the predefined security group is 0.0.0.0/0.

Protocol	Port	Purpose
SSH	22	Provides SSH access to the Connector host
HTTP	80	Provides HTTP access from client web browsers to the local user interface and connections from Cloud Compliance
HTTPS	443	Provides HTTPS access from client web browsers to the local user interface

Protocol	Port	Purpose
TCP	3128	Provides the Cloud Compliance instance with internet access, if your AWS network doesn't use a NAT or proxy

#### **Outbound rules**

The predefined security group for the Connector opens all outbound traffic. If that is acceptable, follow the basic outbound rules. If you need more rigid rules, use the advanced outbound rules.

#### Basic outbound rules

The predefined security group for the Connector includes the following outbound rules.

Protocol	Port	Purpose
All TCP	All	All outbound traffic
All UDP	All	All outbound traffic

#### Advanced outbound rules

If you need rigid rules for outbound traffic, you can use the following information to open only those ports that are required for outbound communication by the Connector.

The source IP address is the Connector host.

Service	Prot ocol	Po rt	Destination	Purpose
Active	TCP	88	Active Directory forest	Kerberos V authentication
Directory	TCP	139	Active Directory forest	NetBIOS service session
	TCP	389	Active Directory forest	LDAP
	TCP	445	Active Directory forest	Microsoft SMB/CIFS over TCP with NetBIOS framing
TCP 4		464	Active Directory forest	Kerberos V change & set password (SET_CHANGE)
	TCP			Active Directory Kerberos V change & set password (RPCSEC_GSS)
	UDP	137	Active Directory forest	NetBIOS name service
	UDP	138	Active Directory forest	NetBIOS datagram service
	UDP	464	Active Directory forest	Kerberos key administration
API calls and AutoSupport	HTTP S	443	Outbound internet and ONTAP cluster management LIF	API calls to AWS and ONTAP, and sending AutoSupport messages to NetApp

Service	Prot ocol	Po rt	Destination	Purpose
API calls	TCP	300 0	ONTAP cluster management LIF	API calls to ONTAP
	TCP	808 8	Backup to S3	API calls to Backup to S3
DNS	UDP	53	DNS	Used for DNS resolve by Cloud Manager
Cloud Compliance	HTTP	80	Cloud Compliance instance	Cloud Compliance for Cloud Volumes ONTAP

#### Rules for the Connector in Azure

The security group for the Connector requires both inbound and outbound rules.

#### **Inbound rules**

The source for inbound rules in the predefined security group is 0.0.0.0/0.

Por t	Protoco l	Purpose
22	SSH	Provides SSH access to the Connector host
80	HTTP	Provides HTTP access from client web browsers to the local user interface
443	HTTPS	Provides HTTPS access from client web browsers to the local user interface

#### **Outbound rules**

The predefined security group for the Connector opens all outbound traffic. If that is acceptable, follow the basic outbound rules. If you need more rigid rules, use the advanced outbound rules.

#### Basic outbound rules

The predefined security group for the Connector includes the following outbound rules.

Por t	Protoco 1	Purpose
All	All TCP	All outbound traffic
All	All UDP	All outbound traffic

#### Advanced outbound rules

If you need rigid rules for outbound traffic, you can use the following information to open only those ports that are required for outbound communication by the Connector.

Service	Po rt	Prot ocol	Destination	Purpose	
Active	88	ТСР	Active Directory forest	Kerberos V authentication	
Directory	139	ТСР	Active Directory forest	NetBIOS service session	
	389	ТСР	Active Directory forest	LDAP	
	445	ТСР	Active Directory forest	Microsoft SMB/CIFS over TCP with NetBIOS framing	
	464	ТСР	Active Directory forest	Kerberos V change & set password (SET_CHANGE)	
	749	ТСР	Active Directory forest	Active Directory Kerberos V change & set password (RPCSEC_GSS)	
	137	UDP	Active Directory forest	NetBIOS name service	
	138 UDP A		Active Directory forest	NetBIOS datagram service	
	464	UDP	Active Directory forest	Kerberos key administration	
API calls and AutoSupport	443	HTTP S	Outbound internet and ONTAP cluster management LIF	API calls to AWS and ONTAP, and sending AutoSupport messages to NetApp	
API calls	300 0	TCP	ONTAP cluster management LIF	API calls to ONTAP	
DNS	53	UDP	DNS	Used for DNS resolve by Cloud Manager	

### **Rules for the Connector in GCP**

The firewall rules for the Connector requires both inbound and outbound rules.

#### **Inbound rules**

The source for inbound rules in the predefined firewall rules is 0.0.0.0/0.

Protocol	Port	Purpose	
SSH	22	Provides SSH access to the Connector host	
HTTP	80	Provides HTTP access from client web browsers to the local user interface	
HTTPS	443	Provides HTTPS access from client web browsers to the local user interface	

#### **Outbound rules**

The predefined firewall rules for the Connector opens all outbound traffic. If that is acceptable, follow the basic outbound rules. If you need more rigid rules, use the advanced outbound rules.

#### **Basic outbound rules**

The predefined firewall rules for the Connector includes the following outbound rules.

Protocol	Port	Purpose
All TCP	All	All outbound traffic
All UDP	All	All outbound traffic

#### Advanced outbound rules

If you need rigid rules for outbound traffic, you can use the following information to open only those ports that are required for outbound communication by the Connector.

The source IP address is the Connector host.

Service	Prot ocol	Po rt	Destination	Purpose	
Active	TCP	88	Active Directory forest	Kerberos V authentication	
Directory	TCP	139	Active Directory forest	NetBIOS service session	
	TCP	389	Active Directory forest	LDAP	
	TCP	445	Active Directory forest	Microsoft SMB/CIFS over TCP with NetBIOS framing	
	ТСР	464	Active Directory forest	Kerberos V change & set password (SET_CHANGE)	
	ТСР	749	Active Directory forest	Active Directory Kerberos V change & set password (RPCSEC_GSS)	
	UDP	137	Active Directory forest	NetBIOS name service	
UDP 138		138	Active Directory forest	NetBIOS datagram service	
	UDP	464	Active Directory forest	Kerberos key administration	
API calls and AutoSupport	HTTP S	443	Outbound internet and ONTAP cluster management LIF	API calls to GCP and ONTAP, and sending AutoSupport messages to NetApp	
API calls	ТСР	300 0	ONTAP cluster management LIF	API calls to ONTAP	
DNS	UDP	53	DNS Used for DNS resolve by Cloud Manag
